Boat Support

Motor Support

Second semester plan

Programmation part

- Develop the boat's control system
- Integrate sensors and process navigation data

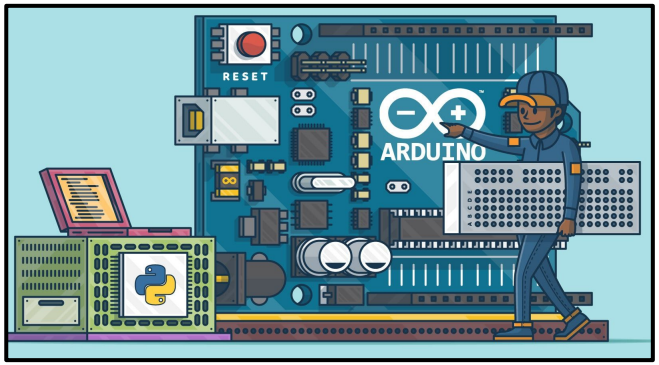

Assembly and motorisation part

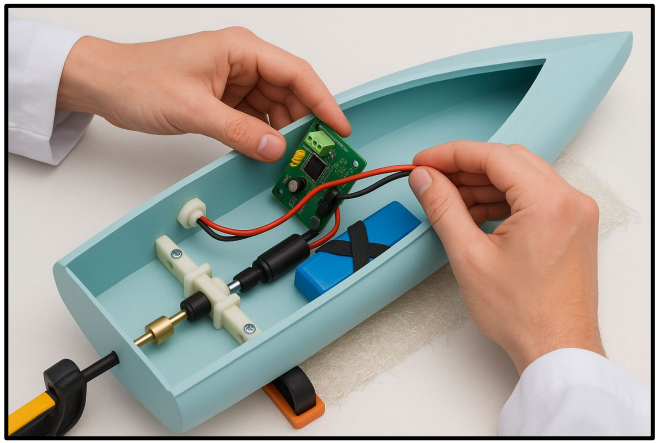

- Positioning, securing the motor with screw and drive shaft.
- Installing the battery, sensors and all components
- Checking proper functioning and conducting operational tests.

Environmental part

- Life Cycle Analysis

Mold’s End Life cycle

Reusing our mold to reduce impact on the environment

- Cutting the mold in two parts using a wooden board to **create vegetable garden**
- Promoting circular economy ⇒ **reused PLA, reused screws, and reused Wooden board**
- Educational value: demonstrates **material reuse** and **eco-design principles** for student project

Thank you !
